

# New Features & Enhancements for FCS

*a Jobba Trade Technologies product*

FCS is a fully integrated, cloud-based software system that reaches every aspect of a commercial roofing business. This document outlines the new features and latest enhancements made to FCS.

## Reporting

### Desktop Calendar Tool Fix

- Removed "Dispatch" as a selectable Report option in the Calendar Tool.

## Service Module

### Service Dispatch Custom Fields

- Added the option to display custom fields in the Client Portal service dispatch request, Mobile service dispatch request, and Client View service dispatch request. This provides contractors and their customers the ability to add a PO# or WO# to the Dispatch Ticket as it is being created.

## Development

### TimeCard Tool Enhancements

- Added a warning pop-up when a user clicks "Add New Employee" in the TimeCard tool.
- Added a column for "Lunch Time" data in the TimeCard Report and TimeCard Export.
- Added an "Activate 48-Hour Lock" TimeCard setting. When enabled, TimeCard entries, after 48-hours, will not be able to be edited by anyone except TimeCard Super Admins.
- Added a Super Admin role in the TimeCard employee settings. Super Admins can 'unconfirm' entries at any time, even when the "Activate 48-Hour Lock" setting is enabled.
- Ability to add TimeCard entries of a currently punched-in user. You can now select "Punch In Previous" to add a TimeCard entry.
- Ability to expand and see Service Helpers and Production Crew members that are punched in by the Technician/Foreman.
- Added TimeCard settings to Admin Features. This includes an option to force a default "Lunch Punch" for both Service and Production jobs.
- Added a TimeCard setting to auto round TimeCard entry punches to the next 15 minute interval, when enabled.
